Examiner's Comment

Examiner acknowledges that the applicant has amended claims 1-8, 20, and 25-38 & canceled claims 15 and 19. The information disclosure statement (IDS) submitted on September 4, 2008 was filed after the mailing date of the Non-Final action on June 27, 2008. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner. Applicant's arguments, see pages 13-19, filed September 24, 2008, with respect to claims 1-14, 16-18, and 20-41 have been fully considered and are persuasive. The claim rejections - 35 USC § 102 & 103 of June 27, 2008 has been withdrawn.

Examiner's Statement of Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the claims recite a liquid crystal display device having a surface radiation conversion element, a radiation source, a generally plate shaped element body, and a plurality of recessed formed in the surface of the element body or both the first and the second member planar side by closed adhesion forming completely closed spaces of certain size, wherein a number of the completely closed spaces near an edge of the element body near the radiation source is of greater density than density of the completely closed spaces in distance of the element body.

Because none of the references disclosed the details of the recesses from in element body or both the first and the second member planar side by closed adhesion forming completely closed spaces, nor is there any motivation to combine them in a

liquid crystal display device, the claims are deemed patentable over the prior art of record.

Yamashita et al. (USPN 7,004,610) teaches an element body (6 & 8) has a generally plate shape (FIG 3) constituted with a material having a larger electric permittivity than air outside the element body (column 10, lines 40-50; "... a composite layer 50 constituted of a low refractive index region (first refractive index region) 3 of a refractive index n_1 and a high refractive index region of a refractive index n_2 (second refractive index region) 4") and, in the inside of the element body (6 & 8), a plurality of completely closed spaces (3, 4, 50; FIGS 4, 19, & 20) of *substantially* uniform size are disposed whose electric permittivity is smaller than that of the material constituting the element body and whose surfaces opposite to a radiation surface are *generally* flat (Figure 1, 5, 6, 7), wherein a number of the completely closed spaces (3, 4, 50; FIGS 4, 19, & 20) near an edge of the element body near the radiation source is of greater density than the density of the completely closed spaces in a furthest portion of the element body (FIG 3).

However, Yamashita et al. fails to specifically the recesses from in element body or both the first and the second member planer side by closed adhesion forming completely closed spaces.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
